CLAIMS

All pending claims are reproduced below.

1-46. (Canceled)

47. (New) A computer-implemented method for helping a user learn, the method comprising:

- (a) allowing the user to access materials related to a subject to help the user learn;
- (b) determining, based on at least two rules, which additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user, with the at least two rules having a conflict in view of an assessment of the user, and with the conflict resolved to determine which additional materials to present to the user; and
- (c) selecting at least some of the materials accessed by the user at (a) for presentation to the user for a further time so that the user's memory on the materials can be refreshed.

48. (New) A computer-implemented method as set forth in claim 47, wherein at (c) the selecting of at least some of the materials accessed by the user at (a) for presentation to the user for the further time occurs after the additional materials determined at (b) have been presented to the user.

49. (New) A computer-implemented method as recited in claim 47,
wherein the method further comprises having at least some of the accessed materials transmitted via a network to a device to be presented to the user, and
wherein the network includes a private network and a public network.

50. (New) A computer-implemented method as recited in claim 47, wherein the at least some of the materials accessed by the user at (a) are selected at (c) for presentation to the user for the further time depending on a time elapsed from when the user accesses the materials at (a).

51. (New) A computer-implemented method as recited in claim 50, wherein the at least some of the materials accessed by the user at (a) can be repeatedly selected for presentation to the user, but if the time elapsed is more than a predetermined duration of time, the at least some of the materials accessed by the user at (a) are no longer selected.

52. (New) A computer-implemented method as recited in claim 47 further comprising generating materials on the subject for the user to learn.

53. (New) A computer-implemented method as recited in claim 47, wherein the at least some of the materials accessed by the user at (a) can be repeatedly selected for presentation to the user.

54. (New) A computer-implemented method as recited in claim 47, wherein the additional materials determined to be presented to the user at (b), also relate to the subject.

55. (New) A computer-implemented method as recited in claim 47, wherein the additional materials determined to be presented to the user at (b), are determined depending on a time elapsed from when the user accesses the materials at (a).

56. (New) A computer-implemented method as recited in claim 47, wherein resolving the conflict between the at least two rules involves favoring one of the rules over another one of the rules.

57. (New) A computer readable medium comprising a plurality of instructions for helping a user learn, the plurality of instructions, when executed by a computing device, result in the computing device:

- (a) allowing the user to access materials related to a subject to help the user learn;
- (b) determining, based on at least two rules, which additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user,

with the at least two rules having a conflict in view of an assessment of the user, and with the conflict resolved to determine which additional materials to present to the user; and

(c) selecting at least some of the materials accessed by the user at (a) for presentation to the user for a further time so that the user's memory on the materials can be refreshed.

58. (New) A computer readable medium as recited in claim 57, wherein the at least some of the materials accessed by the user at (a) are selected at (c) for presentation to the user for the further time depending on a time elapsed from when the user accesses the materials at (a).

59. (New) A computer readable medium as recited in claim 57, wherein the plurality of instructions, when executed by the computing device, also result in the computing device generating materials on the subject for the user to learn.

60. (New) A computer readable medium as recited in claim 57, wherein the additional materials determined to be presented to the user at (b), also relate to the subject.

61. (New) A computer readable medium as recited in claim 57, wherein the additional materials determined to be presented to the user at (b), are determined depending on a time elapsed from when the user accesses the materials at (a).

62. (New) A computer readable medium as recited in claim 57, wherein resolving the conflict between the at least two rules involves favoring one of the rules over another one of the rules.

63. (New) A computer-implemented method for helping a user learn, the method comprising:

(a) allowing the user to access materials related to a subject to help the user learn;
and

(b) determining, based on at least two rules, which additional materials to present to the user, after the materials accessed by the user at (a) have been presented to the user, with the at least two rules having a conflict in view of an assessment of the user, and with the conflict resolved to determine which additional materials to present to the user.

64. (New) A computer-implemented method as recited in claim 63, wherein the additional materials determined to be presented to the user at (b), are determined depending on a time elapsed from when the user accesses the materials at (a).

65. (New) A computer-implemented method as recited in claim 63 further comprising generating materials on the subject for the user to learn.

66. (New) A computer-implemented method as recited in claim 63, wherein resolving the conflict between the at least two rules involves favoring one of the rules over another one of the rules.

67. (New) A computer-implemented method as recited in claim 63, wherein at least some materials are selected to be presented to the user based on a comparison of an attribute of the user to a plurality of other users.

68. (New) A computer-implemented method as recited in claim 63, wherein the additional materials determined to be presented to the user at (b), also relate to the subject.
